

Hi I'm Dylan

Recent first-class graduate in Computing from
De Montfort University, fueled by creativity and
eager to enhance users' online experience.

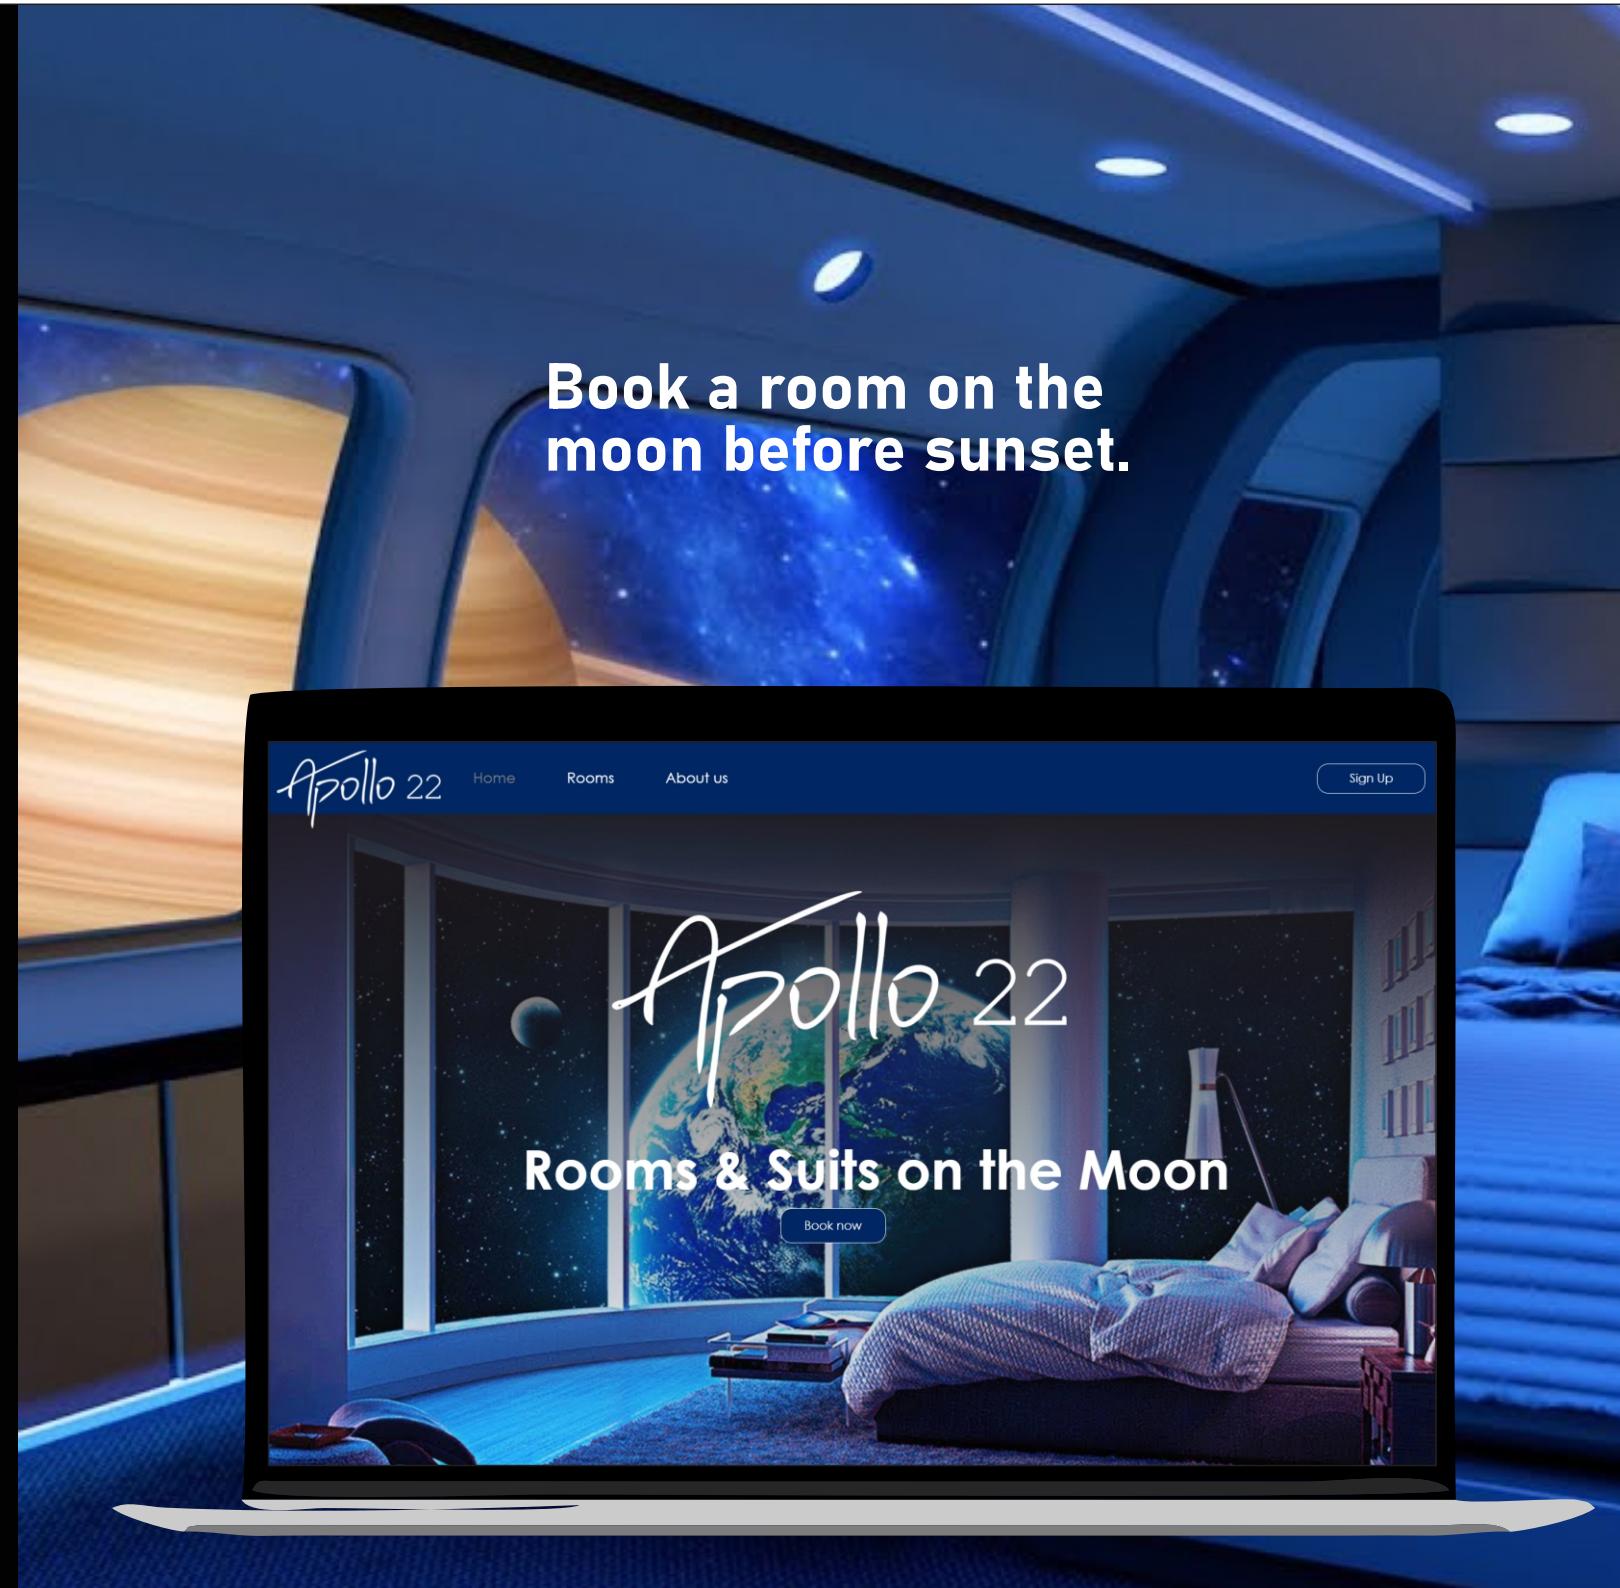

This is a futuristic yet philosophical perspective on design. The client approached us to develop a website for hotel bookings, initially envisioning a simple booking system.

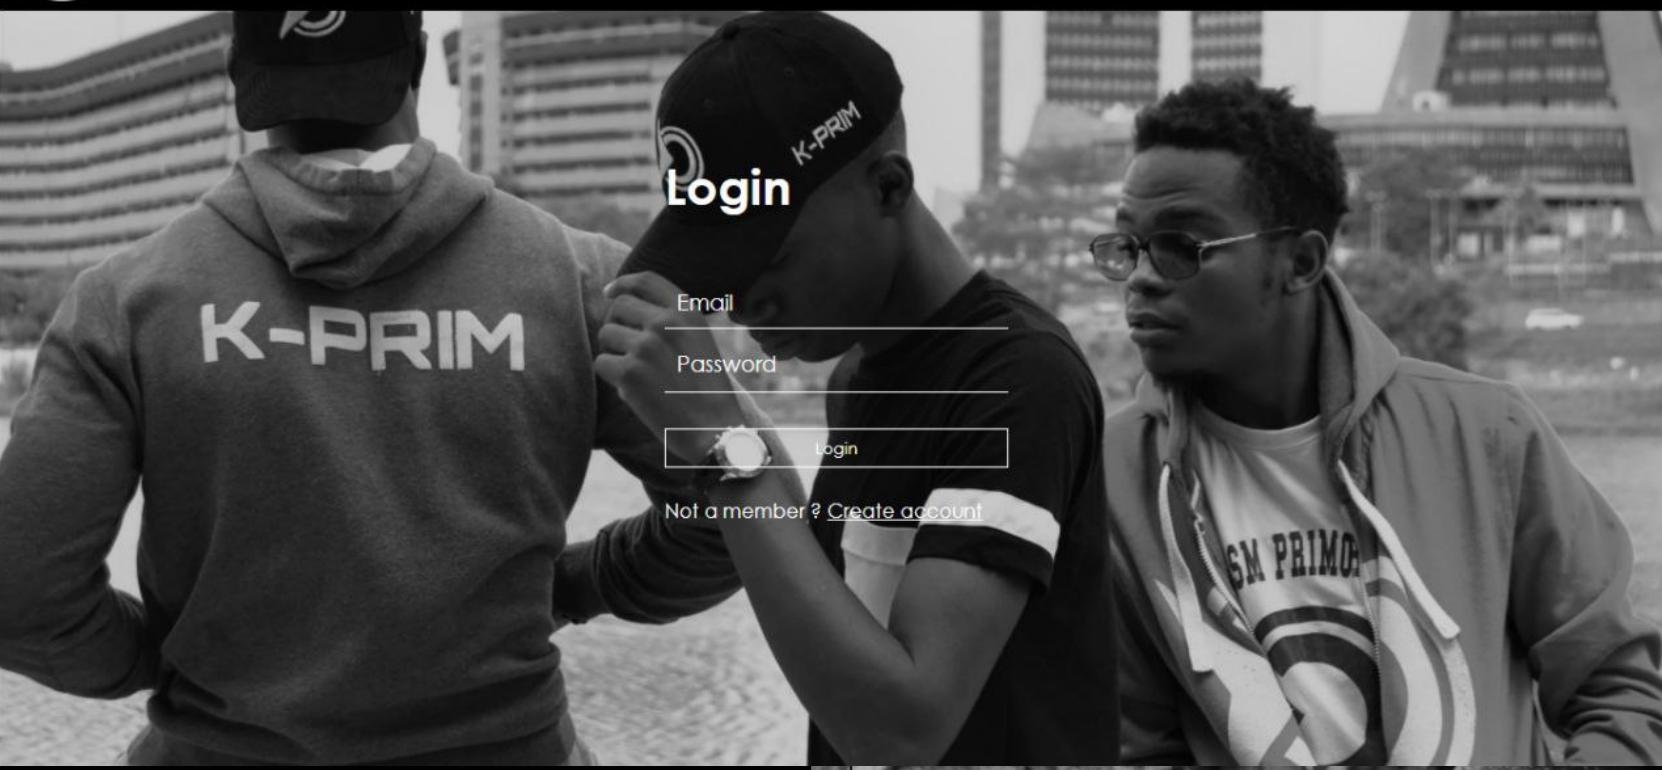

I reimagined the system with a touch of modernity and a myriad of possibilities. What if we could book hotel rooms on the moon one day? If so, what would the website look like?

Ladies and gentlemen, you now have the answer before you.

Tools Used:
CorelDraw HTML CSS
Visual Studio Code C#

Apollo 22

The 10 Usability Heuristics for User Interface by Jakob Nielsen. This is what unfolds when you adhere to usability guidelines to address usability issues.

User experience has never been so effortlessly engaging.

An e-commerce website distilled to its purest, yet most stylish essence. The client, K-Prim Wear, envisioned colors that would embrace and caress users on the forehead, providing them an unforgettable journey.

The hues, the fonts, the graphics – every element handpicked to perfection, crafting the ultimate in user experiences. As I always say, the epitome of cool.

Tools Used:
CorelDraw, HTML5, CSS, Microsoft Visual Studio, C#
